

## 1.5A 3-Terminal Adjustable Regulator

### Description

The LM317 is adjustable 3-terminal positive voltage regulator capable of supplying in excess of 1.5 A over an output voltage range of 1.2 V to 37 V. These voltage regulator is exceptionally easy to use and require only two external resistors to set the output voltage. Further, it employ internal current limiting, thermal shutdown and safe area compensation, making them essentially blow-out proof.

The LM317 serve a wide variety of applications to make a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the LM317 series can be used as a precision current regulator.

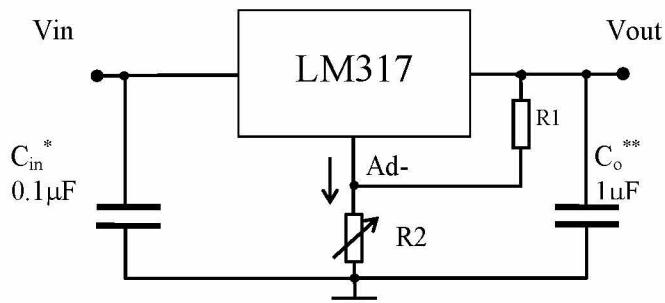

### Futures

- Output Current in Excess of 1.5 Ampere
- Output Adjustable between 1.2 V and 37 V
- Internal Thermal Overload Protection
- Internal Short - Circuit Current Limiting Constant with Temperature
- Output Transistor Safe-Area Compensation
- Floating Operation for High Voltage Applications
- Standard 3-lead Transistor Packages
- Eliminates Stocking Many Fixed
- Operating Temperature Range 0°C ~ 125°C; -40°C ~ 125°C

## Standard application

\* =  $C_{in}$  is required if regulator is located an appreciable distance from power supply filter.

\*\* =  $C_o$  is not needed for stability ; however, is does improve transient response.

$$V_{out} = 1.25V \left(1 + \frac{R_2}{R_1}\right) + I_{ADJ} * R_2$$

Since  $I_{ADJ}$  is controlled to less than 100  $\mu A$ , the error associated with this term is negligible in most applications.

## Maximum ratings

Rating	Symbol	Value	Unit
Input - Output Voltage Differential	$V_i - V_o$	40	Vdc
Power Dissipation and Thermal Characteristics	PD	Internally Limited	
Operating Junction Temperature Range	T <sub>J</sub>	-40 to +150	°C
Storage Junction Temperature Range	T <sub>stg</sub>	-65 to +150	°C

\* Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Notes: (1) Tlow = -40 °C , Thigh = +125 °C

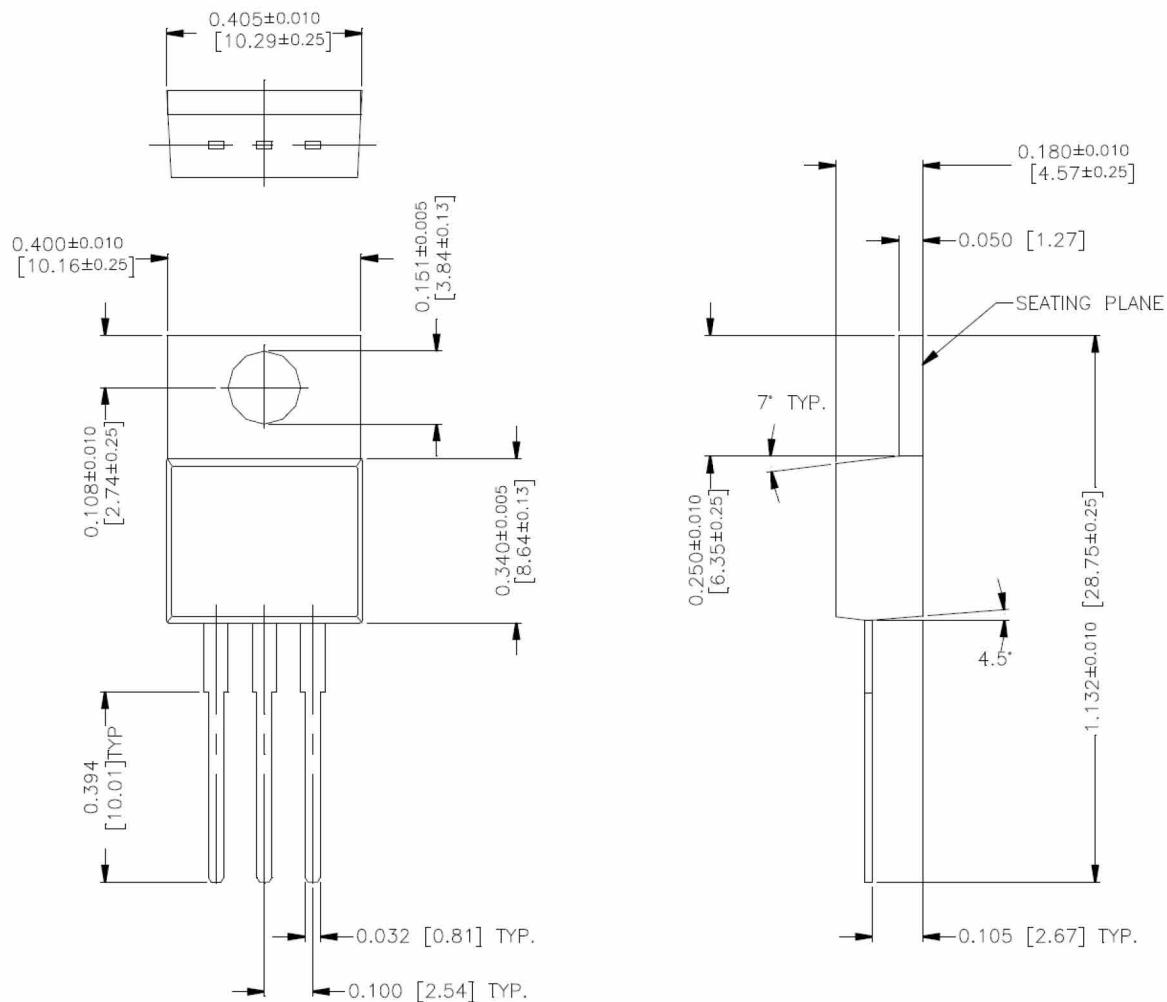

(2) Imax = 0.5 A , Pmax

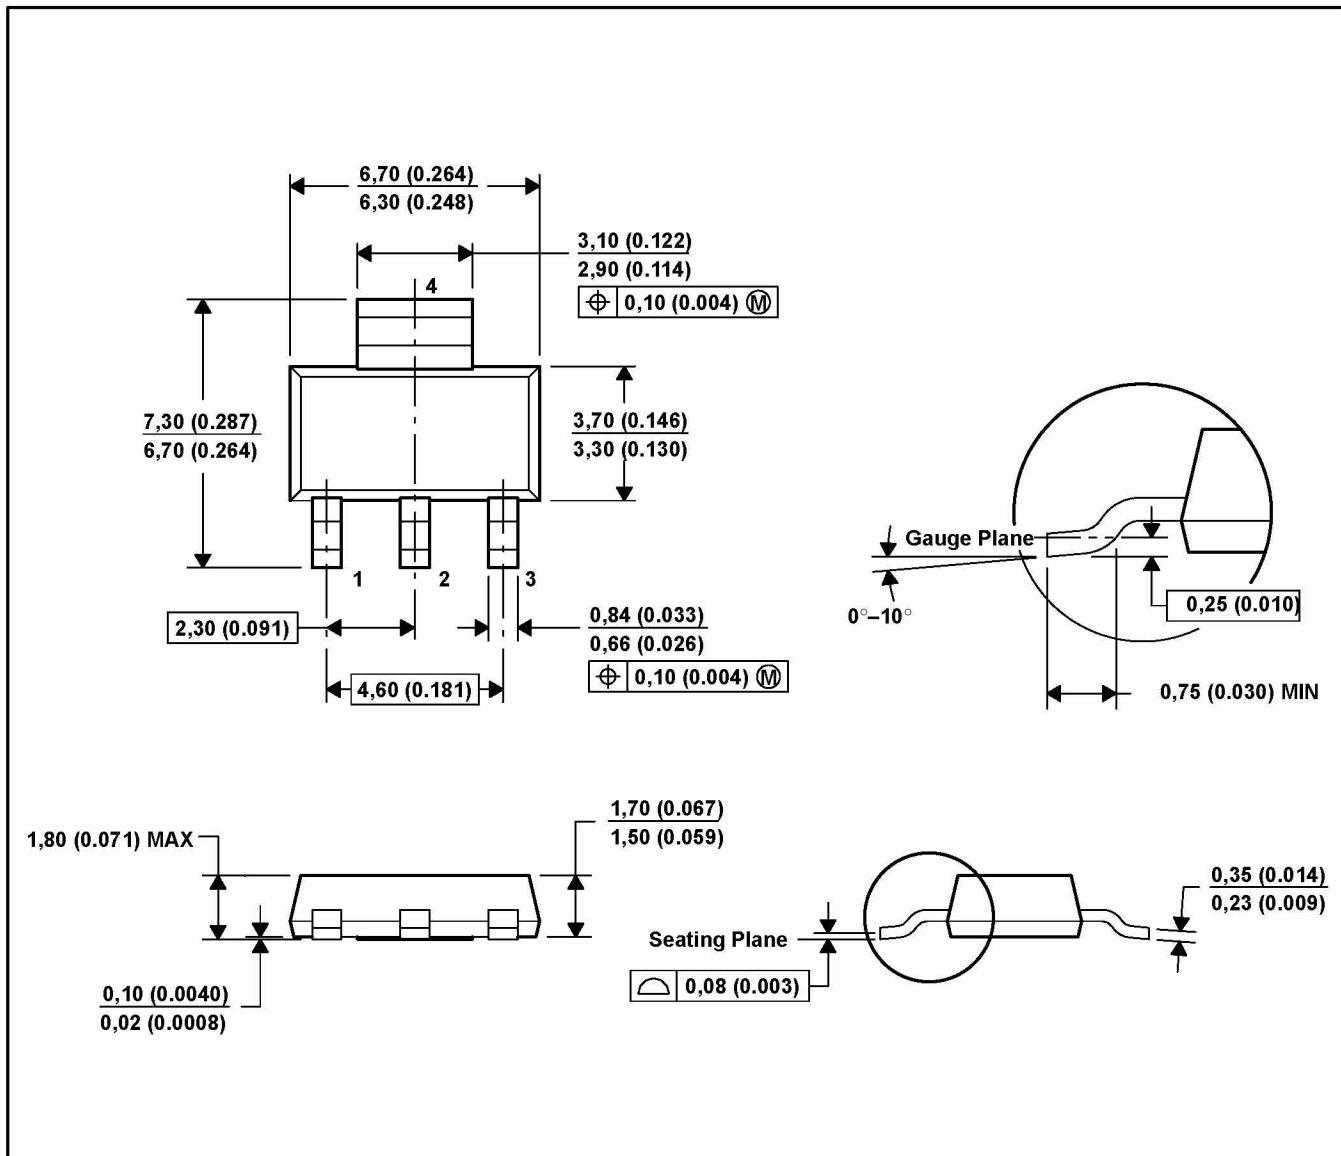

(3) Load and line regulation are specified at constant junction temperature. Changes in Vo due to heating effects must be taken into account separately. Pulse testing with low duty cycle is used.

(4) Selected devices with tightened tolerance reference voltage available.

(5) Cadj , when used, connected between the adjustment pin and ground.

(6) Since Long - Term Stability cannot be measured on each device before shipment, this specification is an engineering estimate of average stability from lot to lot.
