

+5.0V, ±15kV ESD-Protected, Fail-Safe, Hot-Swap, RS-485/RS-422 Transceivers

■ Description

The TK13086E +5.0V, ±15kV ESD-protected, RS-485/RS-422 transceivers feature one driver and one receiver. These devices include fail-safe circuitry, guaranteeing a logic-high receiver output when receiver inputs are open or shorted. The receiver outputs a logic-high if all transmitters on a terminated bus are disabled (high impedance).

The TK13086E driver slew rates is not limited, making transmit speeds up to 16Mbps possible. It is intended for full-duplex communications. The TK13086E family transceivers draw 1.2mA of supply current when unloaded or when fully loaded with the drivers disabled. All devices have a 1/8-unit load receiver input impedance, allowing up to 256 transceivers on the bus. It is available in 14-pin SOIC packages. The devices operate over the commercial, extended, and automotive temperature ranges.

■ Pin Description

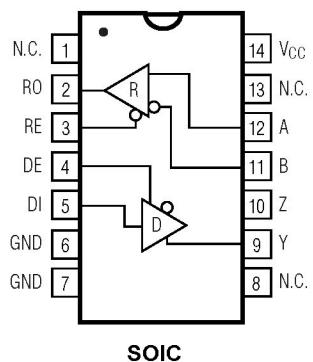

Table 1. Pin Description

Pin Num	Symbol	Pin Description
01	N.C.	No Connect. Not internally connected, can be connected to GND.
02	RO	Receiver Output. When \overline{RE} is low and if $A - B \geq -50mV$, RO will be high; if $A - B \leq -200mV$, RO will be low.
03	\overline{RE}	Receiver Output Enable. Drive \overline{RE} low to enable RO; RO is high impedance when \overline{RE} is high. Drive \overline{RE} high and DE low to enter low-power shutdown mode.
04	DE	Driver Output Enable. Drive DE high to enable driver outputs. These outputs are high impedance when DE is low. Drive \overline{RE} high and DE low to enter low-power shutdown mode.
05	DI	Driver Input. With DE high, a low on DI forces noninverting output low and inverting output high. Similarly, a high on DI forces noninverting output high and inverting output low.
06	GND	Ground
07	GND	Ground
08	N.C.	No Connect. Not internally connected, can be connected to GND.
